

Offshore Energy

Our staff handle a diverse range of insurance requirements for energy companies in Asia. We act on behalf of upstream and downstream clients and include both Contractor and Operator Controlled Insurances in our portfolio. Specialising in construction and operating policies, we are acknowledged as being particularly skilled in the challenging areas of offshore construction and platform decommissioning. We excel in/at exploiting the narrowing gap between the banking and insurance markets for the provision of alternatives to traditional exploration enterprises to some of the world's major integrated oil companies. Our portfolio is characterized by long-term relationships forged through competitiveness and the successful provision of professional and technical services.
